Employment History

Developer experience on freelance projects
AUGUST 2021 - PRESENT

Most of my programming projects were done by using all the technologies mentioned above in my summary across multiple APIs, third-party integrations, and databases.
Since they were personal projects I had to do the frontend, backend, and the DB.
Some of those projects are:

-**WeatherApp:** A weather forecast application that you can use to look at the weather conditions in real-time all around the globe, also gives you detailed information about the city you searched.
Currently working on geolocalization integration and an interactive map.

MoviesApp: It allows you to discover, search and view details of +5000 movies, either old ones and new releases. It also let you watch the trailers of every movie in stored in our Database.

PokeApp: Basically a Pokedex . It's a pokemon wiki will let you do, search for pokemon, see their stats and types, and also create a new pokemon.

Teaching Assistant for fullstack development students
JANUARY 2022 - PRESENT

Teaching Assistants always work on pairs so we were a team during our instance as TA's. Our main responsabilities:

• Coordinate a group of students to achieve integration to the study group.
• Guide students in the first steps of the course.
• Assist to solve exercises and promote group collaboration (Pair Programming).
• Propose ideas to improve the Bootcamp processes.

Full-stack web developer certificate.
Henry Academy Bootcamp
NOVEMBER 2021 - PRESENT

An intensive programming Bootcamp in which I learned a lot about both web development and teamwork in where I developed many personal and requested projects. This Bootcamp gave me approximately 850 hours of coding.
